

MAINTENANCE FREE
STEEL MODULAR FENCING
decorative and durable

Guaranteed for 20 years
Retro fitting panel swap

maintenance-free
won't chip flake or rot

VERY STRONG & SECURE EASY TO HANDLE

EXTREMELY TOUGH &
HARD-WEARING

NO PAINTING OR
TREATING NEEDED

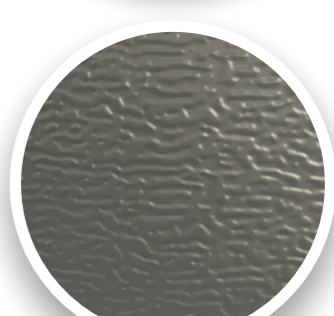

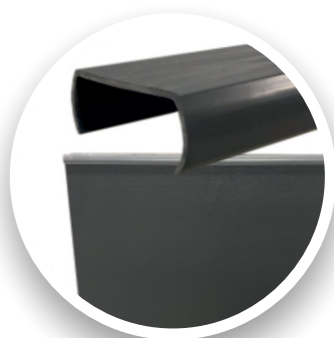

GUARANTEED
FOR 20 YEARS

fully compatible
with slotted concrete
posts

We designed our composite fence panels to **retrofit into concrete slotted posts**, and are manufactured as lightweight sections making them **easy to replace existing timber panels**.

Sections come in two heights so that you can build your panels to suit concrete post systems **with or without gravel boards**.

Endurofence panels are easy to clean and look stunning, **saving time and money** without requiring year-on-year maintenance with a similar timber equivalent.

Unlike traditional composite fencing, our panels are made with the same technology used in making industrial door panels.

These have been wind tested and cover open areas up to 7 metres wide x 6 metres high, assuring you that they are more than strong enough for a 2-metre high fence panel.

very easy to install eco-posts & spikes

The Endurofence posts are **effortless to install** and, like the panels, can be cut to size and made in 3 colours to complement all the fence panels available.

- Lightweight and strong, **easy to cut with a hand saw**
- 1830mm high commonly used with **spike** or **bolt down** system
- 2440mm high **reinforced** used for concreting directly into the ground
- Choose from **Graphite Grey, Natural** or **Walnut** - Posts, matching post caps and end caps.

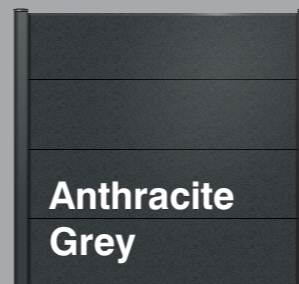

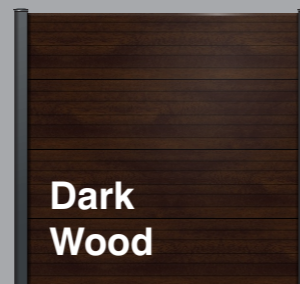

Our **40mm**, thick Endurofence panel is one of the most contemporary fence panels on the market. Available in **4 colours**, **wood grain** or **textured** design, composite fencing will add style and character to any garden. You can use this high-quality fence panel as a garden barrier or residential fence for complete privacy and security.

Our panels are pre-lacquered and pre-treated with coatings of primer 5µm + polyester 20 to 25µm and are maintenance-free, so there is no need for ongoing painting or treatments. They are manufactured from profiled galvanised steel outer sheet (both sides) with a high-density insulated core for a strong, durable, weather-resistant and secure barrier.

The panels are manufactured in **500mm** and **610mm** high sections with a male and female top and bottom, making them very easy to handle. You can easily cut the panels with a steel-bladed jig saw or similar and use an optional 40mm top cap to seal any cuts in height.

STUNNING, DECORATIVE, STRONG AND ACOUSTIC

Endurofence panels have a **thick, durable**, abrasion-resistant topcoat. Bonded to a **galvanised substrate**, this offers outstanding **corrosion resistance** of up to **25 years** (20 years on coastal installations). Perfect for sharing costs with neighbours.

Which way does the
BAD SIDE
Face?
